

Summer 2010

# Small Business Technical Support Services

Your small business needs technical support for your desktop and laptop computers. There are always new programs, updates, and threats to your computer. Let us manage these concerns so you can focus on your business.

We are also able to maximize the usefulness, accessibility and security of your computer network. You may want to add wireless internet access for your customers, but you definitely not want those customers to be able to access your database or printers would you? We can separate and protect different departments of your company, while utilizing a single internet connection.

Whatever project you can think of we can make it happen. We will work out the technical details, and provide you with several options to get it done.

- Windows desktop support
- Antivirus/Antispyware
- Central file storage
- Onsite and offsite backup of files

- Shared Internet Access
- Wireless (WiFi)
- Server Applications
- Linux and Windows Server
- Routing and Switching

- Website Development
- Web Based Applications
- Dynamic database driven content
- E-Mail
- Blackberry/iPhone Services
